

## “PICTURE POSTCARD” COTTAGE HAS SPECIALLY-DESIGNED FOUR-ZONE HEATING

A picturesque Cornish cottage has a specially designed heating system providing underfloor and radiator space heating in four separately controlled zones, as well as domestic hot water. The system uses Honeywell programmers, timers, thermostats and valves throughout and was meticulously designed and installed for superior comfort and reliability by The Stove Shop, Cornwall's foremost heating specialist, based in Liskeard.

“To avoid damage, two of the home's three Honeywell CM67 programmable thermostats have the wireless RF option,” revealed Neil Austen of The Stove Shop. “All system components including the boiler are carefully hidden from view, using roof space and a boiler room constructed under extended eaves at the side of the cottage.”

The householder is delighted with the comfort, control and efficiency provided by her heating system. “It's excellent,” she said. “The best thing about it is its controllability. It means our entire house is always comfortable - and the underfloor heating in the living area is wonderful.” Email: [literature@honeywell.com](mailto:literature@honeywell.com) Web: [www.honeywelluk.com](http://www.honeywelluk.com)

## "PICTURE POSTCARD" COTTAGE.

A picturesque Cornish cottage has a specially designed heating system providing underfloor and radiator space heating in four separately controlled zones, as well as

domestic hot water. The system in the extensively refurbished and extended home was installed by The Stove Shop. It uses Honeywell programmers, timers, thermostats and valves throughout. The four central heating zones are: the main house, heated by radiators; a 45m<sup>2</sup> lounge with underfloor heating; a kitchen and conservatory totalling 70m<sup>2</sup> heated by radiators; and towel rails which operate through a dedicated 40-litre reservoir cylinder governed by a thermostat and motorised valve. To avoid drilling the walls three Honeywell CM67 programmable thermostats have the wireless option.
