

# Honeywell hot up a refurb

**H**oneywell has provided product for a refurbishment project at a Cornish cottage. Programmers, timers, thermostats and valves feature throughout as part of the cottage's new tailored heating system. Both underfloor heating and radiator space heating are used in four separately controlled zones.

System designer Neil Austen, of The Stove Shop, Liskeard, explained: "To avoid drilling the walls and damaging decoration, two of the home's three Honeywell CM67 programmable thermostats have wireless RF options. All system components, including the boiler, are carefully hidden from view."

One of the four heating zones includes a 45m<sup>2</sup> lounge with underfloor heating, which the homeowner is particularly pleased with: "Our entire house is always comfortable – the underfloor heating in the living area is wonderful."
